***Response to Amendment***

1. Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of the new ground(s) of rejection. Accordingly, this action is made final.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 7-15 and 18-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sonoda et al (6,014,453), and further in view of Kuboki et al (5,790,165).

Regard to claims 1, Sonoda discloses reading means for reading color image data stored in image storage means provided in said color-image processing apparatus (see col. 8, lines 33-37); and determination means for determining the similarity between the color image data and a specific image (see col. 8, lines 57-65), wherein determination means determines the similarity between specific image and the color image data that is read at a predetermined time independent of a read instruction given by a user to read the color image data stored in the image storage means (see col. 9, lines 8-16).

Sonoda did not explicitly call for determine pattern of a specific image data. In the same field of endeavor, However, Kuboki (see col. 11, lines 10-18) teach this feature. At the time of the invention, it would have been obvious to incorporate the teaching of Kuboki image determination unit into Sonoda system, because Kuboki provides Sonoda units a system which detects a specific image or a predetermined image form an original image in a color printer, color copier and color facsimile, performing an output control of the original image based on the result of detection (see col. 1, lines 10-15).

Regard to claims 2, Sonoda discloses color-image processing apparatus comprises a computer, and wherein storage means comprises a hard disk (see col. 5, lines 45-47).

Regard to claims 3, Sonoda discloses the color-image data is stored in image storage means as a file (see col. 8, lines 59-64).

Regard to claims 4, Sonoda discloses alteration means for performing alteration for of the color-image data when said determination means determines that the color-image data coincides with the pattern (see col. 5, lines 43-48).

Regard to claims 5, Sonoda discloses pattern storage means, and determination means are controlled by an operating system on a computer, and wherein the operating system periodically controls said determination means to perform determination on the color-image data stored in image storage means (see col. 8, lines 57-65).

Regard to claims 7, Sonoda discloses determination means does not determine the similarity with respect to the color image data having determination completed flag information (see col. 8, lines 33-41).

Regard to claims 8, Sonoda discloses determination means determines the similarity when application software executed on a computer reads the color image data from said storage image means (see col. 8, lines 45-48).

Regard to claims 9, Sonoda discloses determination means performs a determination when an operation input from an operator is not provided for a predetermined period (see col. 8, lines 33-39).

Regard to claims 10, Sonoda discloses determination means performs a determination when a CPU (central processing unit) of color-image processing apparatus does not execute application software (see col. 17, lines 36-48).

Regard to claims 11, Sonoda discloses determination means in, performs a determination when color-image processing apparatus is turned on (see col. 8, lines 42-50).

Regard to claims 12, Sonoda discloses means performs a determination when copying the color-image data from an external storage device to image storage means (see col. 8, lines 54-65).

Claims 13 and 14 are similarly analyzed as claim 12.

Regard to claims 15, Sonoda discloses determination means performs a determination by obtaining bit-map data other than data buried within the image file in a format of a tag (see col. 9, lines 44-48).

Art Unit: 2625

Claims 18 and 20 are similarly analyzed as claim 1

Claims 19 and 21 are similarly analyzed as claim 2.

***Allowable Subject Matter***

3. Claims 6, 16 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Other Prior Art Cited***

4. The prior art made of record and not relied upon is considered pertinent to applicant disclosure.

US Patent No. (5,363,454) to Udagawa discloses image processing apparatus.

US Patent No. (5,216,724) to Suzuki et al discloses apparatus for image reading or processing.

***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
